

CONFIGURABLE FLAT FILE DATA MAPPING TO A DATABASE

ABSTRACT OF THE DISCLOSURE

Disclosed are a method and framework for mapping data from a data source to a data destination. The method comprises the step of providing a plurality of components for performing defined functions to map the data from the source to the destination. These plurality of components perform the steps of (i) reading data from the source, (ii) processing the read data according to a set of rules, and (iii) loading the processed data into the destination. Preferably the plurality of components perform the further steps of (iv) verifying the integrity of the read data, and (v) logging results into a file. Each of the components operates independently of the other of the components.
